Museums aren't the only place to admire great art.
One thing that makes South Lake Union a delightful oddity among urban neighborhoods is that a single company—Vulcan Real Estate—is developing nearly 60 acres right in the heart of the area.

That means design decisions can be orchestrated in a thoughtful, holistic way that simply can’t be done by someone just developing a building or two at a time. But when you play a major role in defining the character of an entire neighborhood, that’s a serious responsibility.

So, at Vulcan, we see ourselves as stewards of a public trust, serving a bottom line that’s not just a financial one. And, when we invest in art, we see it as a natural extension of our mission to create happy, healthy, inspiring places to live, work, and enjoy.
There’s no law in Seattle requiring developers of private projects to invest in public art. When they do so, it’s out of a genuine desire to make the neighborhood more interesting, to stir up a conversation or two, and to provide a sense of place for those who live and work here.

Those were some of the thoughts on the mind of Vulcan Real Estate when the plans for public art for South Lake Union were originally imagined.

One idea was that local and regional artists should create the art, and that they should be given as much latitude as possible. In fact, artists should be encouraged to do something important and pivotal in their body of work, and to think well outside the usual “corporate art” box.

Another unifying side to the public art in South Lake Union is that Vulcan wanted pieces to connect in some way to their sites or reflect the history of the neighborhood.

While there are now 20 commissioned works of art on display, the vision and approach to public art that guided the first installation in 2003 have remained very much intact.

Of course, it’s one thing to talk about art, and quite another to experience it. So we invite you to see the collection. You don’t have to love every piece, but we certainly hope you do love the idea of being in a neighborhood where diversity, character, and aesthetics are honored every single day.

Deborah Aschheim
(collaboration with Daragh Byrne and Joshua Rosenstock)

*Periscope*, 2012
Roto casing resin, solid core optical fiber, programmed LEDs, looping and dynamic video.

**Amazon.com Headquarters**, 207 Boren Ave. N.
Located on Boren Ave. N. and Thomas St.

*Periscope* is Deborah Aschheim’s vision of what a fragment of the internet might look like—a web of glowing fibers and screens giving a glimpse into other worlds, growing inside technology building complexes. She was inspired by the idea of a periscope, permitting observation of remote locations, which metaphorically suggests our ability to virtually observe the simultaneous linked activity of people and sites all over the world and from multiple points of view. Aschheim is interested in visualizing networks of information, memory and thought.

Commissioned by Vulcan Real Estate.

Linda Beaumont

*Labyrinth*, 2003
Laminated glass, steel

**Center for Infectious Disease Research Building**, 307 Westlake Ave. N.
Located at exterior building entrance

According to the artist, *Labyrinth*, placed in front of the main entrance to the SBRI Building, is made “of light and color, with a rhythm that recalls stained glass windows. They glow in the morning light and wash color onto people as they enter the building. At night they shimmer and project their colors outward.” The specific order of colors in this work is derived directly from a chromographic representation of the genetic sequence of the Leishmania parasite. Leishmania, one of the parasites studied at SBRI, causes a disease called leishmaniasis, which affects 12 million people every year. Tucked into the primary images are nodes of color and electron microscopic images of disease-causing organisms.

Commissioned by Vulcan Real Estate, Harbor Properties and Center for Infectious Disease Research.
Leo Saul Berk  
**Threshold, 2009**  
Salvaged wood, epoxy resin  
**Rollin Street Flats, 120 Westlake Ave. N.**  
Located at exterior building entrance and building lobby  

The timbers and decking used to create *Threshold* were salvaged from a one-story building that previously stood on the site. To highlight the history of this wood, the artist milled the 100-year-old Douglas fir beams to make them smooth and true, and then patched their cracks, bolt holes, and other imperfections with tinted resin. The flooring tiles are slices from three of these beams; for each set of tiles, Berk emphasized the same year of growth by cutting away a step surrounding the matching growth ring and filling the void with orange-tinted resin. The tiles are in sequence and book-matched to make the resulting pattern. The standing timbers, floor tiles and decking in *Threshold* respond to the building’s design, recall the material’s former use, and allude to the landscape from which they were originally claimed.  

*Commissioned by Vulcan Real Estate.*

Cris Bruch  
**Universal Adaptor, 2009**  
Cast bronze  
**2201 Westlake, 2201 Westlake Ave. N.**  
Located at West Elm entrance  

Cris Bruch is a constant observer of the shapes and materials that surround us. In *Universal Adaptor*, he borrows the basic form of a common object and transforms it in scale, material and color, revealing the elegance of the everyday. This form simultaneously evokes nature and industry, the past and the present, monumentality and human scale. Familiar, yet difficult to identify, the sculpture appears to conceal a form within it as it either emerges from or sinks into the ground plane. *Universal Adaptor* may seem more permanent than its surroundings, as if it were too heavy to be moved.  

*Commissioned by Vulcan Real Estate.*

Ben Chickadel  
**Clouds III and IV, 2007**  
Polystyrene, Richlite, medium-density fiberboard  
**Veer Lofts, 401 9th Ave. N.**  
Located in building lobby  

The artwork at Veer Lofts is intended to enhance the experience of the lobby as a transitional space. The work itself is composed of two cloud forms mounted to the ceiling and wall of the lobby. The clouds, displayed in their folded and un-folded forms, suggest the constant shift to and from the public world of the street and the private world of the residence; the movement from a busy place to a calm one, the loud to the soft. Each form is constructed of a collection of two-dimensional polygons. Those two-dimensional shapes are repeated on the walls of the lobby as flat panels. The three-dimensional cloud forms are constructed from high-density polystyrene (HDPE), a recyclable plastic, and the two-dimensional panels are cut from Richlite, a highly durable material made primarily of paper.  

*Commissioned by Vulcan Real Estate.*
Dan Corson
Nebulous, 2015
Glass, transparent conducting film, aluminum, photovoltaics, LEDs and electronics
Amazon.com Headquarters,
400 9th Ave. N.
Located in public plaza at 9th Ave. N. and Harrison Street

Our region is known for weather and computer innovation. Images of sky and clouds are revered by Northwest artists. The climate is changing, both environmentally and technologically. We are currently shifting from our analog hard copy world and local computer storage to “cloud-based” systems. The intricacy of these systems eludes most software users and yet clouds of electrons constantly transport information all around us. The two large forms above us, inspired by this evolution in technology, float over the courtyard with two solar lighting shadows imbedded in the pavement below. Neither fully transparent nor fully opaque, these clouds have select glass discs shifting between levels of opacity in a digital dance resembling old school calculating computers or perhaps pulsing lightning within clouds on a stormy day.

Commissioned by Vulcan Real Estate.

Eric Eley
Articulated Start, 2011
Mild steel, stainless steel, urethane enamel paint
Amazon.com Headquarters,
333 Boren Ave. N.
Located in public plaza off of Boren Ave. N.

Eric Eley’s sculptures emerge from the building in both expected and unexpected ways. Dropping from the soffit above and erupting from the landscape below, the forms are reminiscent of vegetation, but instead of being soft and organic, they are angular and man-made. Their tapered spines and bent planes extend into space to suggest new growth, their paths and possibilities continuing to expand. The sculptures’ subtly reflective surfaces catch the light as they reach toward each other into the heart of the plaza, drawing people into and through the space, encouraging a lively flow between Boren and Terry avenues.

Commissioned by Vulcan Real Estate.
Claudia Fitch
*Placeholders, 2007*
Fabricated steel, urethane epoxy paint

**Westlake/Terry, 320 Westlake Ave. N.**
Located at Terry Ave. N. and Thomas St.

*Placeholders,* an artwork installation in multiple parts by Claudia Fitch, refers to the “survivor tree” landscape of early Terry Avenue. Using the urban vocabulary of brick, steel and street landscaping, the asymmetrical composition of oval elements is balanced in counterpoint to the straightforward geometry created by the sidewalk and building facade along Thomas Street and Terry Avenue. When the streets were originally developed for industrial use in the late 19th century, the neighborhood contained remnants of the site’s original old growth forests with the occasional tall evergreen standing in sharp contrast to the newly-formed urban grid.

Commissioned by Vulcan Real Estate and Group Health Cooperative.

Ann Gardner
*Convergence, 2009*
Glass mosaic on a stainless steel armature

**Amazon.com Headquarters, 426 Terry Ave. N.**
Located in public plaza off Terry Ave. N.

The yellow arcs that form Ann Gardner’s artwork, *Convergence,* curve down and inward toward a central spot on the plaza wall. The yellow/gold glass tiles become more intense toward this point, seemingly gathering together the light and energy of the plaza in this one particular place and in turn reflecting it back out into the space.

Gardner’s sculpture is a complex and contemporary approach to an ancient artmaking technique. Laid onto a sophisticated stainless steel armature, the mosaic is assembled from thousands of tiny glass tiles, some of which have a thin metallic film on their backsides, turning them into very small golden mirrors. The mosaic was assembled onto a paper template by a team of traditional craftspeople working in the well-known Franz Meyer Studio in Munich, Germany. It was then shipped to Seattle in sections and reassembled onsite by an Italian master craftsman.

Commissioned by Vulcan Real Estate and Schnitzer West.
Spencer Finch
There is Another Sky, 2014
Glass and printed interlayer, brass, LED lighting

Amazon.com Headquarters, 515 Westlake Ave. N. Located in public plaza between Westlake and 9th Ave. N.

The glass canopy over the courtyard, printed in overlapping colors in geometric patterns, references the effect of leaves in a forest canopy and creates an abstract version of a woodland experience. As the canopy is illuminated by the sun, a dappled pattern reaches down to the architectural space below, mimicking the effect of the natural light as it reaches the forest floor. This abstraction of a natural environment forms a constantly shifting but sheltered environment for relaxation and reflection.

Accompanying the canopy are approximately one hundred LED lights mounted on rods in the planted areas that become fireflies during dusk and dawn. The blinking patterns of the LEDs are choreographed to create the flight patterns of four fireflies as they fly through the space, reimagining the courtyard area as an enchanted forest floor. The title is from a poem by Emily Dickinson.

Commissioned by Vulcan Real Estate.
Annie Han + Daniel Mihalyo, Lead Pencil Studio

*Re-Stack*, 2015
Stainless steel

**Amazon.com Headquarters**, 325 9th Ave. N.
Located in public plaza at 9th Ave. N. and Thomas St.

Taking the departure point of Seattle’s history of re-grading topography on this site and the more recent neighborhood building development, Re-Stack is an analog sketch for the city’s continual reinvention. It is both a memory of a building that once existed and a fragment of a building from the future. Using stacked rectangular forms which reference masonry construction, the sculpture alludes to the developing overlay of civic history as well as the formal abstraction of containerized goods upon which much of current economic growth is based.

Commissioned by Vulcan Real Estate.

James Harrison

*Baladeuse*, 2006
Art glass, stainless steel

**Alley24**, 223 Yale Ave. N.
Located at intersection of alley and through-block connection

James Harrison’s sculpture *Baladeuse* (which in French means either “wanderer” or “lantern”) is made of laminated art glass and is lit from within. Though different in the day and night, the sculpture is a rich and lush presence at the intersection of the two alleys that define Alley24. During the day, *Baladeuse* reflects light; at night, it glows from within, revealing a tessellated pattern beneath its warm exterior.

Commissioned by Vulcan Real Estate and PEMCO Insurance.
Jenny Heishman
*Cabin Corners, 2010*
Fabricated aluminum and urethane epoxy paint

**Amazon.com Headquarters**
500 Boren Ave. N.
*Located on Boren Ave. N. and Republican St.*

Jenny Heishman grew up in Florida surrounded by theme parks, water flumes and golf courses. Nature was mimicked—much of her world was a reconstruction of some other place’s history and landscape. For this piece, Heishman’s aim was to design a sculpture that would intersect with both the architecture of the adjacent building as well as the planter beds in the surrounding landscape. Choosing to work with forms that are recognizable to the Pacific Northwest, her hope was to embed the piece in its site in a way that might remind viewers of a “room” in Seattle’s past.

Heishman’s three sculptures for 500 Boren Ave. N. are based on the forms and construction of log cabins, but rather than trying to simulate reality, the “cabin corners” are together a cartoon-like effigy of the remnants of a cabin. Constructed of aluminum tubes, the pieces were hand-painted by the artist.

Commissioned by Vulcan Real Estate.

---

Jenny Heishman
*Woodpile, 2012*
Stainless steel, bronze, urethane paint

**Amazon.com Headquarters**
207 Boren Ave. N.
*Located on Boren Ave. N. and Thomas St.*

Woodpile is a playful response to the steep slope of Boren Avenue between John Street and Thomas Street: a large pile-up of stainless steel cylinders comes to rest against a makeshift prop, exposing the potential energy of this piece of topography. Stacked like cordwood on one side of the entrance stairs, this exaggerated backyard form has been moved to a place of prominence at the front door, transposing an everyday object for the more formal, symbolic marker that might be more commonly placed at the entrance of a building.

Commissioned by Vulcan Real Estate.
Deborah Mersky
Alcyone Centroid, Light Fixtures, Window Grilles, 2004
Cast iron, stainless steel, brass

Alcyone Apartments, 301 Minor Ave. N.
Located off alley near the parking garage entrance

Deborah Mersky’s three projects for Alcyone Apartments are vine-like masses of plants and animals assembled into intricate two-dimensional patterns. Mersky’s grilles for the east facade of the building soften and humanize the alley, making what could be a strictly utilitarian environment that much richer. Her light fixtures for the front of the building remind us of climbing plants and her plaque, Alcyone Centroid, reminds us all where the center of Seattle really is.

Commissioned by Vulcan Real Estate and Harbor Properties.

Jaume Plensa
Mirall, 2015
Stainless steel

Allen Institute Headquarters, 601 Westlake Ave. N.
Located in public plaza off of Mercer St.

The two mirror-imaged figures are created from the letterforms of seven alphabets—Hebrew, Latin, Cyrillic, Chinese, Arabic, Hindi and Roman. Although the letters define the figures, the text is not constructed to be readable but more as raw material to create a sense of identity. The artist mixes languages to express his hope that we can live together even without a common language. By being able to physically enter the forms, the viewer becomes part of the conversation. The title is the Catalan word for mirror.

On loan from the Paul G. Allen Family Collection.
**Buster Simpson**  
*Ping Pong Plaza, 2004*  
Bronze, stainless steel, ping-pong paddles, catenary lighting  

**ISB Building, 401 Terry Ave. N.**  
Located in public plaza off Harrison St.  

Buster Simpson’s *Ping Pong Plaza* provides a place for workers, neighborhood residents and visitors to relax and exercise in the heart of the city. The table is located in what the artist calls an “outdoor room,” defined by walls of bamboo, a red concrete “rug,” and a chandelier-like catenary light. The ping pong table can double as a lunch or meeting table and conforms to regulation table tennis dimensions. The table sits on what seem to be heavy, turned dining table legs (since the game was originally played on a dining room table), but upon closer examination, each leg reveals itself as a pair of profiles of noted scientists meeting face to face. These paired individuals bounce ideas back and forth, in concert with the action of the ball above. The four pairs of scientists are MaxPlanck/Albert Einstein, James Watson/Rosalind Franklin, Stephen Jay Gould/Edward O. Wilson, and Jean Baptiste Lamarck/Charles Darwin.  

*Commissioned by Vulcan Real Estate and Schnitzer West.*
Akio Takamori
*Three Women, 2006*
Fabricated and cast aluminum, urethane epoxy paint

2200, 2200 Westlake Ave. N.
*Located at Whole Foods Market entrance*

Drawing on memories from his childhood in Japan, Akio Takamori’s *Three Women* is a collection of cast-aluminum sculptures depicting a girl, a young woman and mother with her baby. The figures are all about the same size, suggesting that these three people are of equal prominence in Takamori’s mind’s eye. Though they have come together and stand facing one another, they aren’t interacting, preferring instead to avoid each other’s eyes and keeping a close watch on the space around them.

*Commissioned by Vulcan Real Estate.*

Whiting Tennis
*The Laundry Strike, 2014*
Painted bronze

**Stack House, 1280 Harrison St.**
*Located at intersection of alley and through-block connection*

As homage to Seattle’s female laundry workers of the early 20th century, Whiting Tennis created a figure grouping from wicker, modeled after the domestic baskets and hampers found in the homes of the families whose clothes were washed by the commercial laundries of that period. Cast in bronze, the totemic forms overlook the building just northeast of this site, one of several laundries where 700 of Seattle’s female laundry workers went on strike on June 14, 1917. They were later joined by male truck drivers in a three-week strike, which brought an increased minimum wage of ten dollars per week, a maximum eight-hour work day and strengthened the role of unionized labor in the Northwest.

*Commissioned by Vulcan Real Estate.*
Jamie Walker  
*Beacon, Cloud, Toto, 2010*  
Fabricated aluminum, urethane epoxy paint  

**Amazon.com Headquarters, 550 Terry Ave. N.**  
Located in public plaza off Terry Ave. N.

Jamie Walker’s three sculptures installed in this plaza are clusters of spheres which suggest mountains, clouds and animals. Installed at the entry on Terry Avenue, *Beacon* acts as a landmark at the entrance to the building complex, leading pedestrians into the plaza. Rising dramatically from the ground, the sculpture’s large scale and raw surface hint at the geologic forces that form mountains. *Cloud* hangs on the northeast corner of the south building, looming ominously, but in contrast, hinting at its playful nature by casting a surprising pink halo against the building’s façade on the occasional bright, sunny day. In the middle of the courtyard, *Toto* sits patiently on the edge of a landscape island, waiting for someone to play with.

*Commissioned by Vulcan Real Estate.*
